

- **Due** Apr 17 by 11:59pm
- **Points** 30
- **Submitting** a text entry box or a file upload
- **Available** until Apr 17 at 11:59pm

This is your **final check-in before the presentation preps**. At this point, your system should be **nearly complete** — functional, tested, and ready to be shown. **It is okay to iron out rough edges, fix bugs, or add UI polish/usability tweaks after this update.**

This update is your last chance to document your work before preparing for the final lap. **Presentation prep must already be underway.**

Required Questions:

1. **Project Completion Status**

What is the current state of your project? Is it feature-complete? Any known bugs or missing pieces?

Our game is ~90% done. The core features are working (UI, Map generation, Menu, Save/load). The only thing left is working on bug fixes and, if we have time, adding additional features that we wanted to implement but haven't had time to get to yet.

2. **Attach Final Preview (REQUIRED)**

Upload a screen recording (or two) showing your finished (or nearly finished) system in action. **Screenshots alone are not acceptable at this stage. There is no TIME LIMIT.**

This should reflect the state you'll present during final demos.

The showcase is the mp4 file submitted with this document. It shows buying a mine on a copper node, building conveyors and warehouses, buying new tiles which may contain additional resource nodes, creating a smeltery and a blacksmith to produce copper ingots and copper tools respectively, finding a tin node & building a mine and another warehouse, and changing the smeltery and blacksmith from copper ingots and tools to bronze ingots

and tools (which sell for more). Also showcased the inventory and the sell button to get more gold.

3. Team Member Contributions (REQUIRED)

List what each member has done since the last update — especially during this final push. **Be very detailed.**

Worked on UI objects and scripts for menu, pause and settings. Sent out Bi-weekly. Attended team update meeting. Added music theme functionality – Dillon Opperman.

Completed map generation including resources, details, and base layer map. Attended team update meetings. - Jake Beren

Worked substantially on Bi-weekly6, game balance (prices of all items, buildings, and the tile price function), upkeeping documentation, triaging functionality, created final preview, attended team meetings. - Jacob Oswald

Completed the rest of the required sprite work (including revising/polishing previous sprite work if necessary), the soundtrack, and sound effects. Started working on the final project report document to get ahead of the curve. Attended team up meetings. - Ben Potter

Revamped & polished main menu/screens. Implemented save & load system for up to 3 saves (ability to delete saves in settings). Completed and implemented inventory screen with resource selling functionality. Attended team meetings. - Kristian Neilands

Added functionality to all facilities and implemented proper prices to sell materials and build facilities. Merged all changes from other branches together into one project. - Josh Schmidt

4. Presentation Prep

What's your plan for the presentation? Who is speaking? Is your demo workflow ready?

The main speaker will be Jacob and he will give a general overview of the game and all of the parts while giving the floor to the other group members when it comes to what they worked on (in other words, Josh will be talking about placing buildings and general building implementation and merging, Jake will be talking about map implementation, Ben will be talking about art, and Kristian and Dillon will be talking about UI/menus/save&load).

Ben will handle moving the slides along with the presentation.

Kristian will handle the demo coordination.

Our demo workflow is not yet ready.

5. **Remaining Tasks Before Demo**

What's left to polish, fix, or prepare before your scheduled presentation in two weeks (April 27)?

- Small bugs – ensuring buildings cannot be placed on top of each other, allowing the mouse to move while the inventory screen is open, further testing of save/load functionality, general playtesting.
- Start drafting presentation slides for the presentation.
- Upload to itch.io

Submission Notes:

- Submit **one update per team**
 - Visuals are **required**. **There is no TIME LIMIT.**
 - You are expected to take this seriously — this directly impacts your final presentation score
-
