

Major Scope

- Do we want this to be a sci-fi setting (industrialized steel, computer components, engines,) or a fantasy setting (more resources, smaller production chains, production chains use multiple resources)
 - Decided fantasy/medieval setting

Features

- Inventory, zoom in/out, map expansion

Resources

- Do we want large blobs of the same resource on the map or random tiles with resources?
 - Decided on large blobs of resources.
- Do we want the resources to be predictable or completely random per tile?
 - Predictable allows an additional aspect of gameplay, completely random allows us to sell microtransactions for a guaranteed high value tile.
 - If we went with an approach that combines both aspects (Predictable with some RNG involved), it would be interesting in a gameplay mindset, but it would be more difficult to implement. (For how this would work, we could have areas where ores are more or less likely to generate and then the player could spend substantially less resources to figure out where they are).
 - Decided on random
- Should nodes be finite or infinite?
 - Decided infinite.

Starting

- Do we want a single tile with a guaranteed resource on it the player can place a miner on and sell the ore directly from the miner or a few tiles (3x3? 4x4? 5x5?) so the player can place a selling thing and connect a miner to that?
 - The latter option also means we don't have to allow selling directly from buildings.
 - Decided on 3x3 open tile start, 1 guaranteed resource node.

Entities

- No player entity and you click and drag around the world.
- What functional buildings do we want? (Factories, Mines, Vehicles)
 - Definitely: Mines, Smelters, Basic Assemblers, Warehouses, Conveyor belts.

- Warehouses Connect to a global resource cache.
- Can sell resources from the global cache.
- ~~Quarries~~
- ~~Sawmills~~
- ~~Smelters~~
- ~~Blacksmiths~~
 - Maybe tool smiths, jewelry smiths, and weapon smiths
- Furniture manufacturers?
- Sculptors
- Masons
- Farms? (for the rations/expeditions idea)
- Animals (1/?)
- Leatherworkers
- Food processing
- Stone tiles
- Iron tiles
- ~~Water tiles~~
- ~~Forest tiles~~
- Maybe: Vehicle Stations, Rail Stations, Drone Collectors,
- Do we want some functional buildings to take up multiple tiles?
- For miners on resources completely surrounded by other resources do we want to guarantee all tiles surrounding those tiles, create a drone collector thing that outputs to a conveyor belt, or make some sort of collector arm that can reach over tiles?
 - Decided one extractor per group of resource nodes, the number of nodes determines the speed of the extraction.

Gaining in game currency

- Gain in game currency by selling products, can modify items to increase value

Microtransactions

- Currently, we have that the player has in-game currency that they can spend accessing certain tiles, resources, etc., that they can also buy with real money if desired.
- Everything in the game requires time to complete, time skips (fast forward 30 in game minutes) costs real money.
- buy a guaranteed high value tile with real money.

Elements

- Definitely
 - Copper
 - Iron
 - Coal (for fuel or steel)
- Maybe
 - Water (power, ore refining)
 - Oil (power, rubber, lubricant)
 - Wood (power, furniture?)
 - Gold (valuable, computer components)
 - Silver (valuable, other goods production?)
 - Tin (Bronze?)
 - Zinc (Brass?)
- Do we want this to purely be heavy industrial goods or do we want to also have some other stuff? (Food? Furniture? Bronze/Brass stuff? Cloth?)

General Game Mechanics

- Medieval era aesthetic.
- Tech web – need resources and currency to unlock.
 - Dependent on other areas in the web (Ex: you can't beeline to one specific area and ignore the others)
- Universal Currency
- Inf map/large map (randomly generated or premade?)
- Selling resources to make currency
 - Figure out value system. (Take into account raw materials, scarcity, supply, time to produce).
- UI
 - Grid (top-left) shows resources
 - Hovering on an object produces a text box (top-left?)
- Expeditions
 - Scouting expeditions show more of the map
 - Prospecting expeditions shows more of the resources.
- Tutorial (last thing we work on)
- 32x32 assets (mostly)

Optional Mechanics (if we have time)

- Add more eras (neolithic, bronze, classical, medieval, colonial, industrial)
- Prestige System
- Achievements
- Keep track of stats
- Possible level system tied to the web tree

Main Group Assignments

- ~~Make an infinite map.~~
- Make a camera that can be moved via mouse inputs.
- Make tile entities & game content.
- Make UI elements.

Tech Web Sections

- Metals
 - Iron
 - Bronze
 - Copper
 - Tin
- Consumable Plants
 - Food
 - Wheat
 - Flour & Bread
 - Vegetables (Turnips?)
 - Cloth
 - Flax -> linen
 - Cotton -> cotton cloth
 - Silk moths -> silk
 - Luxuries
 - Tobacco
 - Spices?
- Basic Materials
 - Wood
 - Stone
 - Sand
 - Glass
